

Aspiring AI/ML Engineer | B.Tech Computer Science & AI/ML (Final Year)

EDUCATION

B.Tech in Computer Science and Engineering (AI & ML) — Vignan Institute of Technology and Science, 2022–2026 (Expected), CGPA: 8.71/10

Senior Secondary (Class XII), CBSE — Kendriya Vidyalaya, 2020–2022, CGPA: 93.4%

TECHNICAL SKILLS

Programming Languages: Python, C++ (Basic)

Deep Learning Frameworks: TensorFlow, Keras, PyTorch

Machine Learning: Supervised Learning, Neural Networks, Model Evaluation, Hyperparameter Tuning

Computer Vision & NLP: OpenCV, CNNs, NLP, Tokenization, Word Embeddings

Tools & Platforms: Git, GitHub, Google Colab, Jupyter Notebook, Kaggle

PROJECTS

Handwritten Digit and Character Recognition System | Python, TensorFlow, Keras, CNN

- Built a Convolutional Neural Network (CNN) to classify handwritten digits and characters using the MNIST dataset, achieving 98.6% test accuracy.
- Experimented with data augmentation and dropout regularization to reduce overfitting.
- Deployed the trained model as a simple web demo using Flask for real-time predictions.

Real-Time Face Mask Detection Using OpenCV | Python, OpenCV, TensorFlow, CNN

- Developed a real-time face mask detection system using OpenCV for face detection and a CNN classifier for mask classification.
- Trained the model on a labeled dataset of 4,000+ images, achieving 94% classification accuracy.
- Optimized inference speed to run at approximately 20 FPS on a standard laptop webcam feed.

Sentiment Analysis on Product Reviews (NLP) | Python, PyTorch, NLP, NLTK

- Built an NLP pipeline to classify product reviews as positive, negative, or neutral using an LSTM-based model in PyTorch.
- Preprocessed text data using tokenization, stopword removal, and word embeddings (GloVe).
- Achieved 89% classification accuracy and compared results against a baseline TF-IDF + Logistic Regression model.

INTERNSHIP EXPERIENCE

AI/ML Intern — Cognivue AI Solutions

June 2025 – August 2025 (On-site)

- Assisted in developing and fine-tuning deep learning models for an image classification use case using TensorFlow.
- Preprocessed and augmented image datasets to improve model generalization and reduce overfitting.
- Benchmarked model performance across different architectures and documented results for the engineering team.
- Contributed to code reviews and maintained project repositories using Git and GitHub.

CERTIFICATIONS

- Deep Learning Specialization — DeepLearning.AI / Coursera (2025)
- TensorFlow Developer Certificate — Google (2025)
- Natural Language Processing Specialization — Coursera (2024)
- Introduction to Computer Vision — Udacity (2024)

ACHIEVEMENTS

- Finished in the top 15% on a Kaggle image classification competition with 800+ participants.
- Presented a research paper titled 'Lightweight CNN Architectures for Edge Devices' at a college technical symposium (2025).
